Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If the period for reply specified above is less than thirty (30) days, a reply within the statutory minimum of thirty (30) days will be considered timely.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 1-10 are rejected under 35 U.S.C. 103(a) as being unpatentable over Hoefer et al (6,544,309 B1).

Hoefer et al disclose an apparatus comprising an enclosure (G) adapted to hold a plurality of telecommunications equipment components (col. 4, lines 34-35), means for passing air into the enclosure in order to cool the plurality of telecommunication equipment components (col. 4, lines 10-17), a filter (MB) for preventing airborne contaminants from entering the enclosure (col. 4, line 62 through col. 5, line 16), and means for detecting first air pressure indicative of a pressure of air exiting the filter, means for detecting a second air pressure indicative of a reference air pressure, and means for generating a signal indicative of the first air pressure crossing a desired threshold relative to the second air pressure (col. 6, lines 28-43). Hoefer et al further disclose a differential pressure switch located in the housing, which compares a pressure determined at the time with a predetermined threshold value and, if the pressure falls below the threshold value, sends a signal to the control device (col. 6, lines 30-34). It would have been obvious to a person having ordinary skill in the art at the time the invention was made to provide an enclosure to hold telecommunication equipment components as taught by Hoefer et al to provide an improved electrical

module which not only provides cooling air for cooling the electrical module but also provides efficient filtration to remove particulates out of the air stream passing through.

Conclusion

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

- Gianelo (6,589,308 B1) discloses a cabinet for housing a computer workstation.
- Jones (6,767,379 B2) discloses a computer box filter system.
- Moran, III (5,223,006) discloses an air cleaner box for a computer.
- Jones (6,309,437 B1) discloses a computer box filter cover.
